Many people would love to take the time to tweak photos as much as possible, but with a working day of nine to five and with no overtime, it's hard to make the time. Yet most people are beginning to tweak their images so they can share them on social media sites. With several different online options for sharing photos and videos, it is very easy to get them out there and to share them without much time involved. When you do want to edit images for other sites, like Facebook, Twitter, and so on, you need to make sure that the images are easily edited in other programs and stored where they can be shared. Photoshop is good for this and can be very effective in the way that it manipulates images for use in these situations, but there are many other options available to make sharing images easier.

However, it also has some serious features. Here are some of the must have features you can find on it. Creating Text Effect by Shadow, Color and Stroke Shadow Effect is one of the most interesting feature that you can apply to your images. It works like with the gradient of highlights and shadows. A characteristic of the shadow effect is that the shadow gets darker as it nears the main subject. You can apply shadow to a text by creating a new layer and then apply a Gaussian Blur to it. Next, apply a Radial Gradient and choose Shadow as the effect type and as shown below, choose the color for the shadow. The drawing of the text is done in the main Photoshop element. You can then use the layer effects and change the gradient from white to black to create the shadow. Colorize Effects One of the most common editing mistakes that many people do is colorizing images that are mostly white. But with Photoshop, you can now easily change the color of the image with colorize effects. To colorize an image, you can just select the layer and choose a color. In the example below, the color you chose is not necessarily the color of the image. To keep the color, you can either apply the blend mode or the solid color. If you want to change the color to another color, you can just apply the color adjustment effect with the color you want to use. You can also apply an effects such as intensity, Hue, Saturation and color, which will just give you the look and feel that you want. Liquify Filter One of the most commonly used features of this app is the Liquify Filter. You can use the liquify filter to distort or reshape your images. This is useful when the image does not have enough contrast or is not in the right orientation. The Liquify 05a79cecff
