Google SketchUp Pro 20.0.34364 23.0.Q: Will the 401(k) be worth the time and effort to be withheld? I am in an MBA program, and I have a T1 since I am a full time student. I will be getting my first job after graduating next fall. I am considering withholding my 401(k) money in my 401k account while I am in school, about halfway through my time, in order to save some money on my taxes (I live in NJ). I am wondering whether my taxes will be that high that I have to consider saving or whether it won't be worth the effort. Is my savings going to be worth the effort? Or should I just keep putting money in my 401(k)? Thanks! A: The first thing you need to ask yourself is how much do your taxes really cost you. The answer is not much. Taxation is not a big portion of the total cost of a US based degree. You also have to consider whether your benefits are tied to the fund you contribute to, or whether your benefits are not (you pay out of pocket, get tuition assistance, etc). Most of the time there is not a

difference, but there are slight differences. All in all you are probably not going to save much. You have to ask yourself whether you want to take the chance that at some point you will have to earn that money again. That is a very good reason to keep investing. 1. Technical Field This invention relates to fluid-driven motors and, more particularly, to the induction motor. 2. Discussion Known induction motors are characterized by an armature or squirrel-cage rotor having windings on a periphery thereof and a fixed armature or stator having windings. The stator is mounted for rotation about an axis. It has a multiplicity of magnetic poles, which are arranged on the stator in groups, each group being disposed on a different side of the axis. Typically, such motors are used for electric and/or pneumatic drive applications. Among the problems with induction motors are the presence of magnetic air gaps, which
