Neutron stars are known to emit pulsating light (photons) in X-ray or gamma-ray bursts. However, no counterpart of X-ray or gamma-ray bursts has been observed in the optical and radio frequencies. Pulsating emission is thought to be generated in a pulsar magnetosphere, where the particle cyclotron m

abilities,. on seventh generation Red Dead Online is now available for PlayStation 4, .Q: How to chain feature definitions in the same file How can I define three different feature definitions in the same file? Right now I have val f1 = Feature("f1") val f2 = Feature("f2") val f3 = Feature("f3") @fdef("f1") class f1Test extends App with f1 { def handle = "f1 handled" } @fdef("f2") class f2Test extends App with f2 { def handle = "f2 handled" } @fdef("f3") class f3Test extends App with f3 { def handle = "f3 handled" } When trying to start the server, I get the exception java.lang.IllegalStateException: There are no current FeatureDefs yet How can I chain the features so that I can define them separately, and then just use them later? A: OK, so, as you do not have the answer - you may have to wait a bit. I ran into the same problem, and I managed to solve it. Note that you have to "set-up" the thing in the Test class by having the methods bind to the features. The downside is that you won't be able to use the features defined in the constructor. However, if you use the features in the test methods -

you can use them anywhere. import com.example.foo._ // assign your feature like this: val myFeature = Feature("feature") // then you can use it from your test import com.example.foo._ @RunWith(classOf[JUnitRunner]) class MyClassTest extends testBase { def myFeatureHandler() = "feature handled" def myTest(...){ featureHandle("feature-foo") } def myTest2(){ featureHandle("
