svg2ico is small, accessible and Open Source library that can convert SVG images into ICO images. Its main purpose is creating logos in a simple way in a few seconds, compared with other similar libraries, like this one. Features of SVG2ICO SVG2ICO is a free and Open Source library with a robust code base that contains the following features:

It's written in the Java programming language. It can: Convert.SVG images in ICO format (the widely accepted format for icons used in many operating systems such as Windows and Mac OS X). It can convert multiple.SVG images at the same time. It's fast, as can be seen in the results of the tests made by the authors of the program. It supports the SVG2ICO SVG2ICO Specification 1.0 for the standardization of ICO images generated. It doesn't require any installed applications as external libraries and it's compatible with any image editor that can export the.SVG images into.SVG files. It supports multiple platforms. It has been tested on Windows XP, Windows Vista, Windows 7 and Windows 8. It can convert and process images of unlimited sizes. It supports Unicode text, as the SVG2ICO Specification 1.0, and images that aren't necessarily square, as the SVG2ICO Specification 1.0 allow. It's compatible with any type of image filter. It has been tested with.SVG images of every size and shape and it has been shown to operate. It uses standard image libraries, such as Graphics and Imaging Components and can export an image into a.TARGA file. It can save.ICO images in a ZIP file. It supports advanced features in.SVG files like: stacking, gradients, animations, etc. The processing of.SVG files is very fast and does not take up a lot of RAM memory as the other Open Source image converters do. It supports a batch conversion mode that allows a.SVG file to be converted while the program is running. It uses an Open Source license. Documentation Please visit the project's web site at You will find there a small written manual in English or another language of your preference (see here for more information).  A4-M4 at the end of rebasing arby Newbie Posts: 8 posted 4 years ago Hi I use xcode version 3.2.3. I add new files to my project and then I want to go back to the original version of the files. The only way to do this is using "rebase All". But my app will be relaunched and it will crash because some function has been changed (in the initial version of the files). Does someone know how to update ONLY the "changed files" One more thing: I use "Rebase with Base Version" but it doesn't change the base version in my project.
