Keymacro allows you to make combinations of

keyboard shortcuts to perform various actions. It is not just another application where you press a key combination, but it allows you to save them. You can also define your own keymacros. Like a normal menu bar, Keymacro allows you to go directly to the key combination you want, or the menu item. You can easily add or remove the shortcut key, and you can also change the icon of the shortcut key. When you create the shortcut key, you can specify a label, icon, and command. This allows you to create useful shortcuts. You can add the shortcut key to a single icon, or to multiple icons. When you save a keymacro, it is automatically saved into the file. Thus, if you want to create more keymacro to make combinations, it will be easy to find the keymacro in the folder. Keymacro works with Windows and most keyboards. When it is saved, it is saved in the %USER%\AppData\Roaming\Keymacro\Keymacro.txt file. NOTE: This version supports Windows Vista and Windows 7. Other

Features:

- Keymacro can save any key combination you want. For example, you can save the shortcut key to open the Microsoft Word, Microsoft PowerPoint, Visual Studio, Dreamweaver, or Microsoft Internet Explorer. If you saved a keymacro, you can open it with one click.
- If you want to create more than one keymacro, you can use more than one window. This allows you to create the shortcut keys for more than one application.
- The shortcut key has a label, icon, and command. You can specify any name, image, and command in the "command" field.
- After the creation, Keymacro allows you to change the shortcut key. You can modify the shortcut key's label, command, and icon.
- This version is compatible with Windows Vista and Windows 7. Note: For Windows Vista and Windows 7, you can use the user-defined hotkeys to create shortcuts. You can also use the keyboard shortcuts in MS Office 2013, Internet Explorer 9, Chrome, and Firefox.
