Wow! I need help with this. When I open Adobe Photoshop Sketch, a panel appears on the left side of the screen. The tools are listed on the right side of the screen. These two interface panels can be switched between constantly by pressing the arrow buttons along the top or bottom edges of the screen. This feature works really well. I thought I was alone? What I was hoping to see in CS6, but didn't, is that the functionality in Photoshop and Lightroom was integrated into one editing environment. I wish that as I'm using one program to edit a movie, I could easily do the same edit in another app, or on the web. And of course we'd be able to use Adobe Dreamweaver's incredible document design and editing capabilities. UPDATE 07/05/2015: After years of silence, Adobe has admitted there is a bug in Photoshop CC IIRC here . The good news? David Forster (the lead Photoshop person) has acknowledged the issue and posted two separate bugs for it here , here . So at least now there's some process for dealing with it. The bad news? It's been reported there'll be a new release of Photoshop with a fix on May 16th. I'm not sure how widespread the problem is, but it may be a good idea to give that a shot. PSD CC is $9.99 and it's only $19.99 in the new CCX format like the rest of the programs and this: it's now free for students and schools via Creative Cloud. Because Photoshop Sketch is a free app, however, I cannot really comment on the quality of the app itself. What I like about the tool itself is that it allows me to perform a "drafting" on the iPad and

then continue working on it on the desktop with Photoshop because I do not want to stop working on the project even in the middle. The ability to merge and export final images from Photoshop to other digital formats seamlessly is another benefit. That said, Adobe should perhaps make Photoshop Sketch available on the desktop too, as top tier iPad apps work better when you can resize and change the font size from the desktop version. I can only assume that Photoshop Sketch is optimally designed on an iPad Pro, as well as I can assume it is a great iPad app. I just cannot verify that, because I haven't used it.
