I am somewhat less enthusiastic about new updates to the recently revamped Bridge, Adobe's cloud storage client. In particular, one of my pet peeves has always been the fact that you can't convert files that have already been uploaded to the cloud. That is still the case. Not only that, but the new version still supports cloud sharing only for Picasa and Picasaweb hosted services, but I believe Picasaweb Mobile is removed from the list as well. I don't know how big of a deal this really is, compared to all that this update still comes with. Personally, I will stick with the previous release for Lightroom support, and Mailplane for email support. As it stands, the latest update to Lightroom 5 of course has no more internal storage capacity save for the 4 GB card that came along with my review unit. I've always enjoyed Lightroom's workflows whether I'm using it on a Mac or on a Windows machine. I love the optimized color science - or lack thereof - and the instant preview, and I like that the application can be tweaked and customized to fit my workflow. Color management is no exception. Rather, I have found it to be a much smarter and more powerful color management application. Lightroom 5 just continues that philosophy with even better performance and control. Lightroom 5 is one of the best examples of how corporate culture and dedication can benefit the end user. Of course, it's a free product. However, someone is surely responsible for keeping it all going. I am happy to see that Adobe is actively being dedicated to the challenge of improving the user experience. Overall, Lightroom 5 is just an amazing update that's really making the photography application better and better.

Multi-screen and multiple monitor support was added to Photoshop in version CS5, and now Photoshop is adding a new feature called Workspaces. But Adobe didn’t stop here: the company is constantly coming up with more and more powerful features and tools for artists to unleash their creative potential. Without going too much into details, it is clear that this announcement on 3D is the latest in a series of ways Adobe is planning to streamline its products based on a new core design. Having gone through this transition of being a multimedia juggernaut into a developer-driven company, it is clear that creative professionals are their main concern, which is why we made a shift over the years to focus more on them. The decision to move away from having the 3D feature set was made for the same purpose, that is to make certain the company is giving greater concentration to growing its developer-driven community. And believe me, Adobe will continue to focus on its developers, starting with a \$100 million project. We will be able to deliver even more creative features to the world to allow them to realize their vision. Whilst we are sure that you will understand this decision perfectly well, we want to go beyond that by providing even more information to you about the way the company is evolving, so you can continue making the most of the Photoshop you already love. And since we know that you are a loyal Photoshop family, we wanted to provide you with an update on our plans for the long-term roadmap. And that is why we reached the decision to discontinue the 3D feature set. We have always believed that in the future, 3D editing will support the native GPU APIs. Our 3D workflows and associated features work great on these modern APIs, and we will continue to evolve our 3D and 2D features to offer even more performance, faster and easier ways to work. Meanwhile, we are looking forward to seeing happen with the Substance Universe in the third-party marketplace. But most importantly, we are committed to working closely with the wider community to ensure that new classes of innovative solutions are developed and focused specifically on the needs of digital artists worldwide.

The marquee tool has three modes: *select*, *marquee*, and *direct select*. Select makes a normal selection, marquee makes a bold, cloud-like selection, and direct select makes a selection based on an existing path, which can be a major time-saver. When selecting a path, the tool behaves in two different ways. You can use one of the three corner handles to select a vertex point or add a new vertex. The marquee tool is also able to select an edge midpoint, a corner point, or a vertex midpoint by selecting the midpoint of a line segment. Once you have a vertex selected, you can rotate the selection either by using the selection marquee or rotating the image with the control key to create a path. Once you are satisfied with the selection, you can then remove it by clicking the logo at the top of the toolbar. To move the selection, click on an empty area of the image. In order to help keep your workflow going, Photoshop has a Keyboard Shortcuts feature. It allows you to assign a shortcut key or combination of keys to a specific Photoshop command. If you have a super-fast workflow that allows you to click *Ctrl* to create a new layer, you can assign the **Ctrl + L** shortcut key combination to this command and create a new layer much faster. Once again, no software is perfect, but Adobe Photoshop Elements has many features that make it the choice for those in need of a powerful image editor. For consumers looking for a powerful and feature-rich software, Adobe Photoshop is your best bet. For designers and content creators looking for a more streamlined workflow, Photoshop Elements offers a pathway to new photos with a collection of free and inexpensive desktop or mobile photoshop alternatives for use in the public, print, or web.
