Another plus is the Mac Preview Match feature that enables you to use Photoshop to look for stock assets in your library on your PC, then import the best-matching set of resources into Photoshop. Subsequent clicks then update other areas, such as the location information for the image. You can pull in selection boxes and paint and use them to create guides and paths within the image. In this sense, the new features enable you to start from scratch and build images with confidence. Photoshop Touch is built around the idea that what you can do on your tablet will mirror what you can do on your big-screen desktop. The feature makes your tablet experience more like the desktop experience by putting tools designed for touch in the same spot as the equivalents on the desktop.
